### DETAILED ACTION

1. This action is responsive to the Amendments file don 05/05/2008. Claims 1-9 and 15-42 are pending and presented for examination. Claims 10-14 have been cancelled. Claims 1, 6, 9, 15, 24, 29, 32-34 and 36-42 have been amended. Claims 1, 15, 24, 36, 39 and 40 are the independent claims and the remaining claims are dependent.

#### *Allowable Subject Matter*

2. Claims 1-9 and 15-42 (renumbered as claims 1-37) are allowed.

#### *Reasons for Allowance*

3. The following is an examiner's statement of reasons for allowance:

The prior art made of record does not teach or fairly suggest the combination of elements as recited in the independent claims. Specifically, the prior art does not teach: A resource deallocation module (RDM) *executing prior to the execution* of the traditional garbage collection. The resource deallocation module frees obsolete references of the user session objects before the garbage collection frees the user session objects. When a user session is about to expire and before the garbage collector is invoked or executed, the resource deallocation module is executed to remove any obsolete resources. In that way, the obsolete references of the user session objects are freed by the RDM followed by the user session objects being freed/by the traditional garbage collector. The resource deallocation module accesses the object graph of the user session, traverses the object graph, dereferences user session objects by applying methods to remove references by a set of rules for a given user session object, and also

deallocates any resources owned by the user session object by applying methods to release resources by a set of rules for a given object. This helps to address the problem of memory leaks due to obsolete references.

The dependent claims being definite, further limiting and fully enabling by the specification are also allowed.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### **EXAMINER'S AMENDMENT**

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

#### **IN THE CLAIMS:**

Claims 10-14 are hereby CANCELLED.

15. (Currently Amended) A system comprising:

a database including:

a software program configured to initiate, process, and terminate user sessions;

an object graph defining an interrelationship between objects of said user session;

a resource deallocation module linked to the software program and responsive to an impending termination of said user session to deallocate obsolete allocated external resources of each object of one or more objects created for a user session, wherein said obsolete allocated external resources have not been released by said object so that said one or more objects created for the user session are not referenced by a remaining of said one or more objects and which do not reference one or more of the allocated resources; and

an automatic memory management garbage collector module invoked subsequent to a completion of the deallocation performed by the resource deallocation module, the automatic memory management garbage collector module for removing each of said one or more objects which is not referenced by a remaining of said one or more objects and which does not reference one or more of said allocated external resources.

39. (Currently Amended) A system comprising:

a database including:

a software program stored in the system and configured to initiate, process, and terminate user sessions;

a resource deallocation module linked to the software program, the resource deallocation module deallocating one or more obsolete allocated external resources of one or more user objects of a user session responsive to

an impending termination of said user session, wherein said one or more obsolete allocated external resources have not been released by said one or more user objects; and

an automatic memory management garbage collector module invoked subsequent to a completion of the deallocating performed by the resource deallocation module, the automatic memory management garbage collector removing each of said one or more user objects which is not referenced by remaining ones of said one or more objects and which does not reference said one or more obsolete allocated external resources.

6. Authorization for this examiner's amendment was given in a telephone interview with Attorney of Record Michael Hudzinski on August 11, 2008.
